

black hole accretion disks pdf

Accretion disks are a ubiquitous phenomenon in astrophysics; active galactic nuclei, protoplanetary disks, and gamma ray bursts all involve accretion disks. These disks very often give rise to astrophysical jets coming from the vicinity of the central object. Jets are an efficient way for the star-disk system to shed angular momentum without losing too much mass.

Accretion disk - Wikipedia

A black hole is a region of spacetime exhibiting such strong gravitational effects that nothingâ€”not even particles and electromagnetic radiation such as lightâ€”can escape from inside it. The theory of general relativity predicts that a sufficiently compact mass can deform spacetime to form a black hole. The boundary of the region from which no escape is possible is called the event horizon.

Black hole - Wikipedia

Sigh! The Eddington limit assumes that matter is falling in from all directions. We know that feeding black holes have accretion disks. which totally ignore Eddington.

Researchers discover a black hole feeding frenzy that
