In mathematical analysis and in probability theory, a σ -algebra (also σ -field) on a set X is a collection \mathcal{F} of subsets of X that includes X itself, is closed under complement, and is closed under countable unions (the definition implies that it also includes the empty subset and that it is closed under countable intersections). The pair (X, \mathcal{F}) is called a measurable space or Borel space.

Algebra can essentially be considered as doing computations similar to those of arithmetic but with non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra belongs to the theory of equations and is not, nowadays, considered as belonging to algebra (in fact, every proof must use ...
