The types of crime committed are a function of what is available to the potential offender. Thus, those employed in relatively unskilled environments have fewer opportunities to exploit than those who work in situations where large financial transactions occur. Blue-collar crime tends to be more obvious and thus attracts more active police attention such as vandalism or shoplifting.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
