The little penguin (*Eudyptula minor*) is the smallest species of penguin. It grows to an average of 33 cm (13 in) in height and 43 cm (17 in) in length, though specific measurements vary by subspecies. It is found on the coastlines of southern Australia and New Zealand, with possible records from Chile. In Australia, they are often called fairy penguins because of their small size.

Sin embargo, en la actualidad esta concepción se ha visto superada para pasar a referirse tanto a las colecciones bibliográficas y audiovisuales [1] como a las instituciones que las crean y las ponen en servicio para satisfacer las necesidades de los usuarios.
